

Restart Episode 113: The Scientists' Delusion

In this groundbreaking episode of **Restart**, we dive into the deep intersection of **Quantum Physics** and **Sufi Mysticism**. Drawing from the secrets of the 700-year-old spiritual path, we challenge the very fabric of what you call "reality."

While modern science builds a "virtual" world to keep us comfortable, the **True World** remains hidden behind the veil of our senses. This episode reveals the ultimate secret: how light, particles, and the observer's mind create the illusion of existence.

In this episode, we explore:

The Quantum Secret: Why light behaves as both a wave and a particle, and the mysterious "third state" known only to mystics like Rumi.

The Illusion of Danger: Why a wolf can only eat you if your belief in its power is stronger than your knowledge of the "True Science."

The Science of Backgammon: Decoding the ancient Iranian game as a map of time, days, and destiny.

The Imaginary Universe: Understanding how the "Complete Human" (The Pole) sustains the world through the power of imagination.

Life and Death: A perspective on why Hell and Heaven are simultaneous states of being, and why "death" is merely a shift in the wave of existence.

Welcome to the most "dangerous" program in 700 years. It's time to stop being "literate" and start becoming "knowledgeable."

In past "Goodnight Iran" episodes, we explained that the **True World** is different from the **Actual World**. Scientists are trying to build a "good" Actual World for you just so your and my True World is destroyed. **Sufism** and **Mysticism** focus their gaze on the True World. Today, I will reveal a secret to you so you know that the entire world is wrong—except for Restart. All scientists are wrong—except for Restart. Only we are right. Only **Sufism** and **Mysticism** are correct; as for scientists, whatever they say, they only "know" and "see" the surface.

"So sit at the threshold of the Soul Hoseyni and breathe no word, Until the Spirit breathes a word for your sake."

Welcome to the 113th episode of Restart, the most dangerous program in 700 years. Welcome.

In the 25-26 episodes of "Goodnight Iran", which you haven't heard of, we did a program called "The True World and the Actual World." We explained that the True World has absolutely nothing to do with the Actual World. In the Actual World, there is a chair, there is you, and there is me. But in the True World, neither you, nor I, nor the chair exists. In the Actual World, a circle does not exist, but scientists have accepted it as a hypothetical. In the True World, *only* the circle exists.

In the Actual World, a wolf eats me. But in the True World, it isn't like that at all. If a wolf were to eat me, I could simply exit through the space between the electrons and the nucleus [of its atoms]. When it bites my hand, its teeth should just hit each other. But why does the wolf eat me? Because in the Actual World, the wolf's **belief** in eating is much stronger than yours or mine. It is *certain* it will eat us, but we aren't certain that it *can't* eat us. If we realized a wolf truly cannot eat us, then it wouldn't be able to. Until we understand this, if they throw a human into a lion's cage and the lion tears them apart, there is no difference between that human, a sheep, a donkey, or an idiot. They are identical. Because when a wolf tears a sheep, the sheep has no knowledge; the sheep knows nothing of Science—True Science, not "literacy". A "scientist" just means "literate." For this reason, a wolf eats someone who neither knows nor sees; however, man is the only creature that can neither be eaten by a wolf nor eat a sheep. This is what is called the 'Real World.' And I told you that

Scientists have created hypothetical things and ignored others to produce a "virtual space" in their Actual World so that we can, for example, live more comfortably. They created Skype so I can talk to my mother, but they created this device just so you and I wouldn't understand the underlying reality. Are scientists telling the truth or lying? Based on the theorem I explained in "Goodnight Iran," I tell you: they are 100% lying. If we gathered all the scientists on one TV screen and asked the question I'm asking, they would certainly remain silent. I'm not saying they definitely won't answer; they might answer just so others can laugh at them, but they will certainly be silent. Why do you ignore the circle? We don't want to ignore it.

In the True World, one is the same as ten billion, and ten billion minus a hundred billion are equal. But in the actual World, one is not equal to two; two is a bit more than one, and minus one is less than one, and zero is stuck in the middle. In the True World, **Zero** is what everything is built upon. In the Actual World, Zero is followed by one and preceded by minus one.

Backgammon is the game of Iranians, and it is a very important game. If someone truly had the "Science of Backgammon," they could look at you playing and know when you will die, when you should have died, who you are, and what you are. The board represents the two pages of Time. The 24 points represent the 24 hours of the day. The 30 checkers represent the 30 days of the month. Behind the "6" on the die is the "1," representing the 7 days of the week. When you throw the dice, you could become the richest man or the poorest. But because you don't know the secret of the dice, and you don't understand the concept of:

"We are from the high and to the high we go, we are from the sea and to the sea we go."

Because we don't know this, we use the dice only for "Vain diversion game"

It is said that billions upon billions of 'universal bubbles' like ours are produced—Big Bangs just like our own. But as the poet says, **'From the sea we came, and to the sea we return.'** There exists a vast ocean where every wave generates billions of bubbles. Within each bubble, a Big Bang occurs. These bubbles, resting as if on the 'seafoam' of existence, give birth to universes containing Earths, stars, and billions of planets.

However, there is a great secret about which scientists have remained silent—simply because they lack the knowledge or the answers. This secret proves that our intuition is correct. In Quantum Physics, Albert Einstein has a simple sentence: "It seems God is playing backgammon dice with the Earth." Whether this is Einstein's or not doesn't matter; it's true.

It is as if every wave that leaves the sea generates billions upon billions of universes, and the next wave creates billions more—as if a new die is cast every moment. So, why does this path keep moving forward, and what is it that allows you and me to meet here? We fail to grasp the essence of *'Verily, unto Him we shall return'* as Rumi says, or *'We are from above and to the heights we go.'* In quantum physics, everything scientists have 'created' over the last 500 years—the things you call progress, like mobile phones and cars—has been a facade.

In truth, scientists haven't revealed the ultimate secret to you. Instead of gaining true 'literacy'—which etymologically relates to 'blackness' or the surface—they haven't guided you toward **Sufism and Mysticism**. It is as if they are preventing the 'Empire of Cyrus' (the spiritual sovereignty of the soul) from being proclaimed to the world.

What is the secret? I will give you a very short, simple, and concise explanation, so that even those who are completely unfamiliar with this space can gain a little insight into it. Thomas Young was a scientist who performed a simple experiment—and I'll try to explain it very calmly and simply, just between us. The setup was quite straightforward: he created a dark space, took a box, made a hole in it, and passed a single beam of light through it. When the light passed through, a pattern appeared on the screen. This is perfectly logical; it's exactly as if I made a hole and fired a bullet—if I had high-speed cameras, I'd see the bullet pass right through that hole. But then, Young did something else: he made **two** holes. By passing light through these two slits, he partially settled a long-standing feud among scientists. However, without even realizing it at the time, he discovered something that Albert Einstein would later uncover—something for which Einstein was initially mocked.

When light passes through these two slits (I'm calling it 'light' for now), if light were purely a particle, it should only pass through one hole at a time, because many scientists argued that light is particulate—made of photons. (I want to expand on this later to explain light further). In a logical world, if you fire a 'bullet' of light at two holes, it should still only go through one. It's like me firing a single real bullet at a wall with two holes. For it to pass through both, that single

bullet would have to split into two identical bullets in the real world to go through both holes simultaneously. Yet, when Young ran the experiment, the light passed through both slits at once, proving that light behaves like a **wave**.

The people of Sufism and mysticism said something else that scientists still haven't discovered. In other words, the attitude of Rumi and the people of Sufism and mysticism is that light does not have two states... It is both a wave, and it is a particle, and it is something else too, which we will say after Episode 200.

in the third state that well scientists still don't know, 500 years, a thousand years later, we don't know when. But Rumi shows another state for light which shows it is both particles, it is both waves, and it is something else. We don't want to talk about that. Well, now you, the listener, say, "Well, sir, now it's either wave or particle, what difference does it make?" You will understand the subject with this example. Imagine right now you turned your head up and looked at the moon. The moment you bring your head down, the moon no longer has existence! The difference between a wave and particle is this: every time you look at the sky, you see the moon. Every time you bring your head down, there is no moon anymore. Meaning, scientists sit beautifully and investigate and they say, "Hosseini says exactly right, the moon isn't up there at all," meaning we have no moon up there. And why do all the people of planet Earth see the moon, and even the Arabs adjust the month based on the lunar calendar, or like today they say "the moon has entered Scorpio." This is a question. We must see, what do we see?

You look; imagine you are looking at a star in the night sky. This star, for example, is a thousand light-years away, a thousand light-years, for example, you imagine for example, fifteen billion miles... I don't know if it's a billion kilometers, for example 20 billion kilometers it has distance from us. What do you see? This is the first simple question. In that star, a photon has been released, imagine it like this, meaning a particle of light has been released. The moment this particle is released, the light might be affected by gravitational fields or in neutron stars, it may find deviation. But the moment this light passes through all those issues and such, our atmosphere also has nothing to do with it, this light comes [and] hits my eye. When I turn my head up simultaneously, it hits my eye, my eye sends this light into the retina and I see. My brain gives the command that an entity exists that a light has originated from there. Now, if I don't turn my head up at that moment... here the complication begins. If I don't turn my head up and don't see this star, twenty million years later another being sees a light [and] that this star is something else and is in another place. It has become a little difficult.

Pay attention. The Sun's light comes, hits the planet Earth, hits a tree, and you see it. Now, imagine that right now, in less than a second, I remove the Sun; how does the Sun deliver the light to me and you? The first photon comes, the second comes, the third comes, the fourth comes, the fifth comes. Now, if I remove the Sun, this fifth one is no longer there. That means the particle that hits this tree from the Sun is not at all similar to the previous particle that hit this tree, nor the next particle that hits this tree. They have a different state. In quantum physics, they did another experiment; meaning, what did they do?" They said, well, now that light passes through two holes, it means it is a wave. A wave—meaning when I throw a stone into the sea, a wave is created. This wave, whenever it hits something, at that moment, the wave stops. Now, if

I don't put a stone in front of this sea wave, this circular shape that exists in the wave continues. It stops exactly at the moment that I am present, and I see this, and I hit it. I could have been further ahead, or I could have been further back. Well, what does this really mean? They did another experiment. They said, 'We will draw a wall in front of this light that we want to hit the wall to see how the light moves. When they drew the wall, the personality of the light changed; meaning the photon changed its path, it did something else. They said, 'How did this photon understand to do something else?' Why did the wave-like nature turn into particle-like, and whenever it wants, it turns into wave-like? What did they do? They decided, when they released the photon... for you to know what it means, it's like imagine I fired a bullet at you—did you understand what happened? But the bullet decides where to go. Not me! It's a big question. I fired the bullet toward your head; the bullet decides in the middle of the way which head to hit! This is what it means. It means the gap between being a wave or a particle is that much. What did they do? They... we must fire the bullet, and then that wall we put in front of Hosseini, we pull it back, and then this bullet comes directly in particle form and hits Hosseini's head. What did they do? They fired this bullet... I'm giving the bullet example... they fired it, and while they were pulling this wall back, before that, this light decided to become a wave!

That means light, light... The photon understood what you want to do in the future! Here the big secret was discovered. That means light, photon, the moment they fired the bullet, there it decided and understood that you have drawn a wall that you are going to pull aside a thousandth of a second later; it said "you're the fool," it went from the other side again! This is a secret that scientists don't want to talk about. What does this secret mean? It means that a star that has exploded, until humanity sees it, it does not exist. It means if on the planet Earth humans didn't live to see this, no star would have existed. It means light... Besides being a wave, it is a particle.

"All particles of the universe, in secret, speak with you day and night: We are hearing, we are seeing, and we are happy; With you, the uninitiated, we are silent."

That is to say, for everything in the world that lives by light, light decides what it should be; light travels and moves through the past and the future in less than a billionth of a second.

Step by step, we are moving forward to expand on this a bit more. This means light decides what your chair looks like, not you. In other words, the carpenter didn't make the chair; light decided the chair should be this way. This is called **Imagination**. So, you produce something based on your imagination, you build something, and you bring something into existence. If we want to speak in colloquial terms, what does it mean? It means that neither hell nor heaven exists, and both hell and heaven exist. Let's give an example; suppose we have a box, we put a particle in this box, we explode it, there is radioactivity. We also put a cat in this box. Another example that one of the scientists gave. When this radioactive particle explodes in this box that we haven't seen inside of. Pay attention, we haven't seen inside this box, we put a cat in it and we also put a particle to explode. The moment this particle explodes, we have ordered a hammer to go into the cat's brain, killing the cat. Meaning, with the explosion of this radioactive particle and the release of, for example, that photon; this cat definitely dies. But in the real world, we all know it dies, but in the quantum world, it is not like this at all. Meaning, when you

open the door of the box, you face two forms, two entities; a dead cat that is on the ground and a living cat that is standing! Meaning, at the moment of the release of this light, this radioactive explosion, this cat is both dead and alive. This is not understandable at all. Meaning, you are committing a sin, you have both not committed the sin and you have committed the offense. Because light is hitting our eyes. When you are cutting off someone's head in Evin Prison, you have both cut off their head and you have not cut off their head. You have both died, and you haven't died. Being a particle and being a wave are so different from each other. Meaning, you are seeing your world based on light and it is this light that decides what shape your world is. And the true shape of this world is not what you and I see. In other words, scientists have a funny joke sentence, they say we hope that just as we are not looking at the moon, for God's sake, may the moon be there!. Meaning, they accept that if they look at the moon and the moon is there, when they don't look at the moon, the moon is not there. So we review that star from the beginning again. When a particle explodes in that star, it is thousands of light-years away from us, if it is a wave, it separates from that star in a circle, one kilometer, two kilometers, three kilometers, it keeps getting bigger. Have you seen the circles that... you throw a stone into the sea, you see that the circle keeps getting bigger and bigger and bigger. When you are seeing this light, when the circle that has been released by that photon is five hundred million light-years, this big, and the photon exists in every single place of this wave. And if mankind is not created and doesn't see this star, this light, there is no star. Meaning, if mankind doesn't exist, there is no planet at all, there is no galaxy. There must definitely be a being to see this so that it takes shape. Meaning, when I see this star, the star just comes into existence.

And only humans can see this and creatures that are able to see this. If they see, at that time it becomes like a dam where this wave changes and you understand it simply. Can humans see this elsewhere too? Yes. We go to the body. And we see that in your body... When you sleep, the real world begins. The soul is living in the real world and has no place in the virtual world unless it is in your body. Meaning my soul can never exit my body; exiting becomes death. So what happens when a human dies? When a human dies, the decision-making of the soul—which again is different from it—becomes whether this creature is alive or not alive. Meaning both the cat is dead and the cat is alive. Meaning right now that I am talking to you, I am both dead and alive. Rumi says for this reason: **"Every moment I am both alive, I die a hundred times and I become alive."**

They were able to emit a photon from themselves and reach a power so that you can see the creature or you can live. In short, in quantum physics and the physics that scientists are explaining for you, if we want to conclude in one line, it means that nothing exists in the universe; you and I are not here at all. There is no Hell and Heaven. Because Hell both is and is not. You are both a sinner and you are not; you both told a lie and you did not; you both can be and can not be. When another creature opens the door of the box and sees me, whether I am or am not, he decides that I am dead or alive. Meaning when they placed the bomb and detonated it in Hiroshima, all those people who died there, we decided and we killed them, not that they died. Because [at] the moment of radioactivity, the attitude of photons and the freedom of photons, they, at the same moment the bomb exploded, were all both alive and dead. We, the people of Earth, decided they should die, and because our numbers were greater, they died. If one person thought that this explodes [and] nobody dies, and the rest said nobody dies, and I

said they die, they certainly would not have died and the bomb would not have worked. And no wolf can eat me. Wolves believe that they can tear us, and if the people of Earth believe that the wolf can never eat them and they exit from the distance between the electron and the nucleus, it certainly will not eat them. Meaning tomorrow we all go into the zoo, no animal eats us. This cannot be understood. "O You who are beyond imagination and analogy and suspicion and fancy"—it means exactly this. It means that you cannot understand this.

The sentence "The whole world becomes ruined and from love every ruin becomes a shipmate with Noah, then becomes an intimate of the storm. If the storm were still, the heavens would not be revolving; from that wave outside of direction, these six directions become moving. O you stayed under the six directions, both eat grief and do not eat grief." It is saying exactly this. "O you stayed under the six directions..." These three verses are the most comedic three verses that blow all spirituality into the air... later, slowly, you will understand... So well, you say I did a good deed, do I go to Hell? We say yes. You say I did a charitable act, how do I go to Hell? We say we are explaining it in these three verses. With this same attitude of the scientists whom you now accept, all of them say that no world exists. Pay attention. He says, "The whole world becomes ruined and from love every ruin becomes a shipmate with Noah, then becomes an intimate of the storm." Becoming a shipmate with Noah. Becoming an intimate of the storm means what? It means that he becomes friends with the boys of Evin [prison], who kills the prisoners and is also a relative of the prisoners' families. It means exactly this... pay attention. "If the storm were still, the heavens would not be revolving; from that wave outside of direction, these six directions have become moving." It says to me, "O you stayed under the six directions," meaning you and I, Hosseini. "O you stayed under the six directions, both eat grief and do not eat grief, for those seeds under the earth one day will become a palm grove."

In Ghazal number 728, Rumi has a masterpiece verse, he says: "Azrael has no hand or path over the lovers; for the lovers of love, love and passion themselves kill." He says no Azrael kills anyone. All those who become "Restart follower" and go to **The complete Human** and he gives them something and they learn to release photons from themselves and understand between staying dead and alive, they become a creature that journeys to seventy thousand worlds, and at the same time that the spoon is in their mouth, they see their mother too and they understand that there is no mother and no spoon and it does not exist. They are journeying in another place in their own thought-wave movement. But they accept that there is a mother and unfortunately they must respect her. "Azrael has no hand or path over the lovers," he says "no Azrael takes your soul, religions are lying, Mr. Restart follower.

"We are enemies of ourselves and the friend of the one who kills us; we are drowned in the sea and the wave of the sea kills us." Rumi mocks everyone completely in this one verse. When did you see that someone in the sea dies because it is the sea? It is actually very ridiculous. Meaning Rumi says, "We are drowned in the sea and the wave of the sea kills us." He points exactly, saying do you know who is killing you? You say no. He says it is not the particle movement of the photon, it is between waves... It is the third state that is supposed to be explained from program 200 onwards. He says we are drowned in the sea, he says I am the sea, he says I don't kill the sea, you don't kill, the world doesn't kill—"the sea itself" kills the sea. Meaning water kills itself. I am standing now, my house is here, the wave of the sea hits my

house and I die, that's logical. But that the wave of the sea hits the sea and kills the sea is funny!

"We are enemies of ourselves and the friend of the one who kills us; we are drowned in the sea and the wave of the sea kills us. Azrael has no hand or path over the lovers; for the lovers of love, love and passion themselves kill."

So Hell both is and is not. Whatever you do, you are one hundred percent hellish, and whatever you do, you are one hundred percent heavenly. For this reason, Sufism says, sir, whatever comes into existence in the "Unity of Existence," **The Beautiful One** loves it. Whether it be bad or good. Meaning it is the necessity of loving. And for this reason, it says every particle that is in the universe, whether the bad Hosseini or the good Hosseini, whether whatever is in the world, whether past or future, whatever has been created, because (Hu) is doing this, He loves them all. And from the killing of each of these, He cries and becomes upset. And for this reason, He says to Jonah, you were wrong that you became upset by the torment... He throws him into the belly of the fish and these are stories. He says to Moses, were you happy that you killed him? He says to Noah, did you enjoy that you were killed... are you having a good time now that everyone died and you remained, are you very happy now? Religious stories go aside completely. This fear they gave you goes aside completely. Something else exists. In Rumi's poem I read for you last time... but these are important:

"Nothing is fixed and in place; everything is in change and eternal travel. Particles became joined with particles until all earth and sky appeared." The joining of particles with particles brought heaven and earth into existence. "Until we recognized them all; for each one we built a name and a meaning."

He revealed the secret of quantum very beautifully. He says, do you know why we understood this is the Milky Way galaxy? We say no. He says if we don't recognize them, they don't exist. "For each one we built a name and a meaning," meaning when the human came to the planet Earth, he accepted that a planet Earth exists. So why did Adam and Eve, according to religions, enter the Earth? Because they think now that an Earth exists, therefore they are stuck in the Earth. So where are Adam and Eve now? Adam and Eve are in a place we explained for you before; where? "No-where" . A place exists called No-where. It has no "place." These two are there now. In a virtual space, these two accepted entering the planet Earth. The problem with them being driven to the planet Earth is that these two did not have the belief that no one can trick them; God planted the seed of trickery in their hearts. Meaning He said to them, beware of Satan! No Satan existed. Meaning God played a trick on Adam and Eve. He said Adam and Eve, they said yes, He said beware that Satan does not trick you. From that moment, the seed of hypocrisy was planted in them. They said, so surely another creature must also exist... they did not know it was only themselves. Then what happened? Then no creature existed. God said, did I not say do not eat from this? They said yes. He said, then why did you eat? They said that snake guy tricked us! That guy was not there at all....

God said bravo! It is a justification. In the "Goodnight Iran," program I also explained what it means. Meaning my child puts his hand in my pocket, picks up money, takes it and eats cake—

a five-year-old child—I say to him, son, did you not see my money? He says I don't know, I didn't see, I think your money is lost. Then so that he doesn't get upset, the parent says, oh you're right, maybe it is lost! We are in the air. No Satan exists... There is no world at all. Adam and Eve stood there and [it is] exactly like mental problems. God told them another creature tricks you, and they, whatever they did themselves, threw it on the neck of that creature; that creature has existed for several billion years and it constantly grows too. Meaning a creature that did not exist. According to this sentence: "Until we recognized them all, for each one we built a name and a meaning." They named him "The Accursed Satan." Where is the Accursed Satan? He is in me, he is in you. Where is the sky? It is in me, it is in you.

So we review the result again, let's see what quantum tells us. We look at the world from the beginning. When you look at the moon, because you look at the moon, the moon is. When you do not look at the moon, the moon is not. You exactly believed your mom is sitting in front of you now, so your mom is. Show respect. Now that you are so stupid to think there is a leader who is doing oppression to you, then suffer its pain too, may your eye be gouged! You believed he exists and for this reason you go to the torture chamber; you believe if they pull your nail it will hurt, he also pulls and it hurts. Meaning in reality you believed that someone is above your head who is hitting you on the head, and that you are not at fault, now you must go and answer. This whole world is arranged one after another...

"The first brick if the architect lays crooked, until the Pleiades the wall goes crooked." We did not understand this. Which architect laid the first brick crooked? Adam and Eve themselves. They laid it crooked, until now it is going crooked just like that. Constantly **The complete Humans** come and they straighten this, constantly it becomes crooked again. Because the belief in you is that the wolf eats you, and the wolf actually doesn't have that much personality to eat you. But you believe that the wolf eats you and it eats you.... Scientists come [and] hold a funeral ceremony... then they ask what happened, he died? They say the wolf ate him!!! It is very funny. And every second, like you and me, it comes into the universe and that sea produces a wave and these bubbles come and the universe begins. A ridiculous creature named "Time" which does not exist—due to the reason that you must throw the matter on someone else's neck, time is produced, justification is produced, imagination is produced, analogy is produced, suspicion is produced. I will now read this poem once more in another way:

"O [You who are] beyond imagination and analogy and suspicion and fancy, from everything we have seen and heard and read." If we understand this, we see **The Beautiful One**. So in order to see **The Beautiful One**, what must you pass through? Through reading and writing and understanding and seeing and your thoughts and... "O beyond imagination and analogy," meaning God is beyond... beyond **The complete Human**, meaning Allah is beyond imagination and analogy and suspicion and fancy. From everything that we have seen and heard and read. When you leave these behind, the photon that finds salvation from you and is released sees something that it understands:

"I look at the sea, I see You in the sea; wherever I look, I see You everywhere." Meaning what? Meaning the moment he sees Him, now he realizes he is forced to return to planet Earth.

Because a mother has been created, he must make this big and send it away. It is exactly like a puppet show where the child wants to sleep, puts his puppet to sleep and goes, and we all know that the puppet is not alive and is not a creature and does not exist.

"Nothing is fixed and in place; everything is in change and eternal travel." So we review again; scientists confirm. When a scientist confirms our words, it shows that God cannot interfere because knowledge is at this point now. Every cell with which I commit a sin tonight, with the cell that I commit a sin with next week, it is not that cell at all! So they cannot punish me, do not worry. "A blacksmith in Balkh committed a sin, they beheaded a coppersmith in Shushtar"—meaning this is completely under question. How can God—I committed a theft tonight, next week my cells have completely changed—punish my changed cells? Why? My current cells are committing the sin; the next cells are not known. For this reason they say do not forbid anyone. In breathing, the inhale and exhale, suddenly a disbeliever and a believer are produced.

"So for every breath a thanks is mandatory, every breath that goes down is a sustainer of life." We review this poem of Saadi again. So every breath that goes down is what? It is a sustainer of life, a continuer of life. Meaning what? Meaning you take your breath in, unfortunately you must see the moon. Meaning you must recognize; when you recognize, you see. So when you see the moon, the moon is. From the perspective of Mars, the moon does not exist at all; meaning the soul of Mars does not see the moon. The Sun sees no one around itself; it is turning. To the human—meaning to the human, not the monkey, not the donkey—they gave something so that whatever he sees comes into existence and he puts a name on it. "Until we recognized them all; for each one we built a name and a meaning." So the universe is billions upon billions of infinite vision, and the further we go, we find and we put names on things and they do not exist.

"Once again these familiar particles become drowned in the whirlpools." It says all galaxies and the universe and these go into the whirlpools. So the waves of the sea and the whirlpool and such a frightful thing. Hafez also says. You are in the air. Quantum physics officially announces no world exists, but scientists do not want to tell you this. Because the moment you close your eyes and believe that no world exists, it no longer exists. For the moment you close your eyes and understand that no world exists and in which part of the world you are living or in which part of the "non-world" you are living... as Rumi says, to find the "No-where," the way is that you find **The complete Human**. That thing which he gives to you, its secret is in that same released photon of yours.

Then that particle decides. So **The complete Human** is what they call a creature that possesses a producer of waves and particles that are all conscious and creates the shape for everyone in a certain way. Meaning he creates the virtual world based on his own mental belief in his own world of imagination, where we are floating in the imagination of **The complete Human** and living together. When **The complete Human** disturbs his imagination, everything is destroyed completely. For this reason they say **The complete Humans** are one after another... and a Pole must be for the pillar of the earth. If **The complete Human** does not have **The complete Human** behind him for less than a hundredth of a second, the world falls apart. And this is his imagination that we are living in... for this reason all the people of Sufism and

mysticism are dizzy within his imagination and within that mole of his. So every creature in the universe is growing in the imaginary belief of **The complete Human**, and you there build cars and you oppress everyone and he is laughing loudly, not at you, nor at me.

At the one who has taken the world seriously... So no one in the world is killed and no one dies, no Azrael exists. This world you must be in is the world of the imagination of **The complete Human**, and for this reason **The complete Humans** are in a state of progress. A time comes when **The complete Humans** start collecting these imaginations and returning [them] to the Essence they must return to, and at that time they call it «انا لله وانا اليه راجعون» meaning "Indeed we belong to Him and to Him we return" . Meaning the last **The complete Human**, compared to the Adam and Eve of religions, has progressed so much that he realizes no Satan exists and this is the progress of eternal travel.

"Nothing is fixed and in place; everything is in change and eternal travel. Particles became joined with particles until all earth and sky appeared. Until we recognized them all; for each one we built a name and a meaning we built, it did not exist. Once again these familiar particles became drowned in the whirlpools and the particles became severed from one another, again they joined in another form."

Meaning these particles again... in order for us to understand what it means, meaning it says that this wave that comes, a bubble is made; again the bubbles go into the sea; the next wave that comes, another bubble is made again. For this reason, scientists, in order to understand this subject, came and found parallel universes for themselves. In these last few years, the secret is in this: that light is both particle and wave-like, and also something else that you will understand from program 200 onwards from Rumi; scientists do not know this yet...

Thank you for listening to this program. I don't know if you listened or not because in your wave-world you listened for nothing. This program belongs to 25 billion years in the future that you are listening to, and billions upon billions of years in the past have gone, but because you listen it exists; and a Hosseini who is not but it is as if he is, who brings this sound to your ear in this air which is not but it is as if it is, in the middle of waves which are not but they are, and a microphone which is not but it is, you hear, and then you understand and it becomes food for your soul which is but you think it is not, and it becomes your dream which is but you think it is not, and another world which is but you think it is not, and the imagination of **The complete Human** which is but you think that it is not. Unfortunately, this food becomes for that same **The Beautiful One**, because **The Beautiful One** gave it so that this subject returns to **The Beautiful One**. Within this, observers exist like you and me, who whenever they lift their heads and see **The Beautiful One**, there the wave is cut and they make them understand that:

"Therefore, in every era, a guardian is present, the test is permanent until the Resurrection."

The program was a bit difficult, but for the reason that later I want to return and give some explanations. When I said quantum physics, meaning you should know—Oh my God—it's a new thing, actually nothing is there, actually no one knows... I was forced to talk like this. For example, if the people of the world understand who built Hell, well, they will surely kill him or

bring hell upon him. If we promise that we will not resort to killing, next week I will say who built Hell. For this reason we explained quantum so that we can currently explain the builder of Hell for you next week to go forward and see what will happen.

"A Pole must be for the world of the spheres; a pivot is needed for the stillness or the pillar of the earth."

Thank you for listening to the words of Rumi and Saadi and Hafez, because this program is not mine. Farewell.
